SGI AND SEOS SUPPLY FIRST REALITY CENTER® IN QATAR TO OCCIDENTAL PETROLEUM

In March 2003, SEOS, in partnership with SGI, successfully completed the installation of Qatar's first Reality Center®, for Occidental Petroleum of Qatar Ltd.

The immersive Reality Center® will be used for a range of seismic interpretations to deliver quality data to Occidental's engineers and geoscientists to enable the development of accurate simulations.

SEOS was commissioned to supply SGI with the display system for the Reality Center®. This display system incorporates two channels of active stereo 3 chip DLP projection, providing a fully immersive image over the screen. The system also includes SEOS's own unique OptiBlend edge blending as well as full media switching capability through a sophisticated combination of matrix switch and control system capabilities. A single pipe SGI Onyx 3200 and multiple additional image sources will power the system.

Ian Dyer, Visualization Sales Manager for SEOS stated, "this project represents another World's first, and SEOS is very proud to have played such a fundamental role in the implementation of this Reality Center®. The system will provide Occidental Petroleum in Qatar with the means to improve exploration and production in the region, whilst reducing financial risk."

ABOUT SEOS

SEOS is a leading global supplier of display and immersive solutions for simulation and visualization, delivering advanced solutions for the civil and military, training and research, visualization, leisure and entertainment markets.

SEOS has established a worldwide reputation for supplying innovative, high quality, cost-effective display solutions combined with a high level of expertise and exceptional service. A comprehensive range of services and unequalled design system integration capability provide a display solution that is custom designed and built for its application.
