## SEOS ACHIEVES JAA LEVEL D CERTIFICATION IN HELISIM SIMULATOR

SEOS and Thales Training & Simulation (TT&S) have achieved a world first in the certification of the HELISIM Simulator to JAA Level D. This level of approval is the first one in Europe for a helicopter simulator and a world-wide first for a EUROCOPTER aircraft simulator equipped with a Thales visual generator ThalesView and SEOS PANORAMA®.

Helisim obtained level D certification from the French civil aviation authorities in March 2003 for the Eurocopter Super Puma MK1 Simulator and in July for the Eurocopter Super Puma MKII.

SEOS' 60°VFoV PANORAMA® has become the cross-cockpit display system choice for most civil and military flight simulators. The collimated displays provide wide angle images at optical infinity so that the cockpit occupants have an accurate view of the outside world. PANORAMA® systems have been fitted to new build simulators from all major manufacturers.

Steve Gobey, Programme Manager, SEOS says, "At SEOS we have extensive experience of meeting the exacting demands of research and training in a wide spectrum of civil and military applications. We are delighted to have been involved in this project. This achievement is a testament to a true working relationship between two global organisations."

### ABOUT SEOS

SEOS is a leading global supplier of display and immersive solutions for simulation and visualization, delivering advanced solutions for the civil and military, training and research, visualization, leisure and entertainment markets.

SEOS has established a worldwide reputation for supplying innovative, high quality, cost-effective display solutions combined with a high level of expertise and exceptional service. A comprehensive range of services and unequalled design system integration capability provide a display solution that is custom designed and built for its application.
