## **SEOS INSTALLS REPLACEMENT PROJECTOR HEAD UNITS FOR LAUNCH CUSTOMER UNITED AIRLINES**

SEOS has successfully completed the first installation of its Replacement Projector Head Units (RPHUs) for launch customer United Airlines, Inc. (UAL).

The installation was on the B747-400 No. 1 simulator at the United Airlines Flight Training Center, Denver, CO. and the contract also includes a second upgrade that will be carried out on UAL's B747-400 No. 2 simulator. Following completion of the upgrade, the B747-400 No.1 simulator was successfully recertified to FAA AC120-40B Level D approval standards.

By replacing the SupraLux tubes in RSL projectors with commercially available 9" CRTs, the SEOS RPHU can enhance the performance and reduce the cost of ownership aspects of the visual display system. This makes it an ideal upgrade solution for the existing installed base of flight simulators currently utilizing such projector equipment.

Peter Gray, Senior Staff Engineer at UAL noted, "United Airlines Visual Engineering is pleased to announce the successful FAA AC120-40B Level D certification of the B747-400 No.1 with the SEOS Projector Replacement Solution. This solution meets the requirements of Image Generator flexibility, cost of ownership and supportability that satisfies our strategic plan going forward."

Richard Layfield, VP Sales USA, SEOS, commented, "SEOS is extremely pleased that United Airlines elected to become the launch customer for our RPHU product, which is providing them with a cost-effective method of enhancing and extending the life of their RSL projector systems."

### **ABOUT SEOS**

SEOS is a leading global supplier of display and immersive solutions for simulation and visualization, delivering advanced solutions for the civil and military, training and research, visualization, leisure and entertainment markets.
