SEOS UPGRADES PLANETARIUM DISPLAY AT CHABOT SPACE & SCIENCE CENTER

SEOS has completed the Fulldome upgrade of the 70' display in the Ask Jeeves Planetarium at the Chabot Space & Science Center in Oakland, California. This recent upgrade makes the system the most sophisticated Fulldome display in the World.

The system uses SEOS Mercator to display content from SEOS Media Server and Sky-Skan's DigitalSky 2 , enabling Chabot to experiment with content whilst continuing to run daily shows. Mercator even allows live fades between the two systems so that they can both be used in the same presentation.

The upgrade included a 6 channel digital projection system, SEOS OptiBlend™, SEOS Scorpion™, SEOS Media Server, UniView™, a sophisticated wireless control system and 241 interactive audience handsets. The combination of SEOS Media Server, UniView™ and Sky-Skan's DigitalSky 2 allows three different user interfaces and platforms, providing the opportunity for Chabot to collaborate with external programmers and users.

Alexandra Barnett, Executive Director/CEO, Chabot Space and Science Center, noted "We're excited about what the next year will hold and you can be sure that some of the new thinking in domes is going to come from this innovative partnership at Chabot."

Martin Howe, VP Visualization & Operations, SEOS, explained, "When we saw the challenging request for proposal we knew that this was an opportunity to bring together a range of the latest tools and technologies for the first time. We were thrilled to be awarded the project and have since devoted our efforts towards meeting and exceeding the customers' expectations. The team at Chabot have already got to grips with the system, which probably represents the pinnacle of the market, and are really putting it through its paces. We're extremely fortunate to have an opportunity to demonstrate what we can offer to the market and to have worked with such a practical and knowledgeable client."
