SEOS TO UPGRADE FINNAIR ATR 42/72 FULL FLIGHT SIMULATOR OUT-OF-THE-WINDOW DISPLAYS

SEOS has been selected by Finnair to replace the existing out-of-the-window display system monitors on the ATR 42/72 simulator with a four window SEOS DPM[®] (Digital Projection Monitor) solution. The upgrade will take place at the Finnair Flight Training Center, Helsinki Airport in June 2006.

The DPM is a proven CRT monitor replacement solution which interfaces to existing or new box structures and optics. It is based on the SEOS Zorro[®] 1410 projector which utilises COTS projector technology incorporated with SEOS patented 4th panel optics. The resultant display has excellent dynamic range and sequential contrast ratio greater than 125,000:1, giving a truly black scene with exceptionally clear lightpoints. The multi-channel configuration will be controlled by SEOS proprietary Cobra[™] display management software. The contract also includes the supply of a spare projection unit, installation of the equipment and training for Finnair's engineers.

The four SEOS DPMs will interface to a 3 channel Evans & Sutherland EP-1000CT Image Generator.

Finnair's Manager Simulators, Mr Asko Nuopponen says, "We are pleased to be working with SEOS and Evans & Sutherland on this visual upgrade. The combined visual will make a marked improvement to our ATR 42/72 simulator and provide exceptionally high performance. We look forward to benefiting from this on our ATR 42/72 simulator and we believe that our many customers will be as pleased as we are with the improvements this visual system upgrade brings to our simulator."

Richard Layfield, VP Simulation Sales, SEOS says "SEOS is pleased to work with Finnair to provide additional life and increased performance on the ATR 42/72 simulator. This reinforces the value of our DPM product in the market in order to give simulator operators an upgrade path to solve maintenance issues with older monitor based systems. With support

facilities in Europe, North America and Asia, SEOS can provide 24/7 support around the globe keeping the requirement for large spares holding to a minimum.”
