MACMET TAKES OFF WITH SEOS FOR CHEETAH HELICOPTER SIMULATOR

SEOS has completed installation of a PANORAMA® Lightning display system for a Cheetah helicopter simulator under contract from MACMET Technologies Limited, Bangalore, for the Indian Army Aviation Corps.

The solution consists of a 10ft 220° x 45° PANORAMA Lightning cross-cockpit display system and incorporates five LCD projectors. The system also includes SEOS' unique OptiBlend edge blending technology, Mercator III digital distortion correction, Odyssey Advanced User Handset and Quest software.

John Bastow, Business Development Manager, SEOS, remarked, "This is a prime example of SEOS' ability to create customized and unique systems to meet customer requirements. MACMET's decision to integrate PANORAMA Lightning for such a demanding project demonstrates the capabilities of SEOS' technologies and expertise."

Cdr Ramakrishna (I.N.Retd), Program Manager Cheetah Simulator, MACMET, explained, "SEOS' professional approach in meeting the visual display system requirement is indeed commendable. We were able to achieve the required degree of realism for normal and NVG flying."

Lightning is a version of the successful PANORAMA display system range designed to provide a more compact, wide field-of-view display system for specific applications. The benefits include low maintenance, low acquisition and through-life costs and a substantial reduction in overall display system weight and inertia.
