

20 November 2006

SEOS TO DEMONSTRATE NEW ULTRA HIGH CONTRAST QXGA PROJECTOR AT I/ITSEC 2006

At I/ITSEC 2006 in Orlando, FL., SEOS will demonstrate the new 2015HC QXGA projector, which offers unprecedented contrast, dynamic range and black levels essential for full-capability simulation training.

Visitors will be able to see a projector displaying high-resolution imagery in a darkened environment, representative of the latest system performance for military and Level D training.

Also on show will be a DPM[®] 1410HC fitted to a 26" zero-gap collimator system to demonstrate NVG compatibility, night training and high dynamic range. In addition, a presentation will be showing our display tools technologies, highlighting SEOS' competency in system design and performance.

SEOS has been providing advanced display solutions since 1984. The last 12 months have seen a marked increase in orders across all sectors, particularly military fast jet and commercial flight – both new systems and upgrades. 2007 promises to be even busier, with innovative products coming to market, a number of key programs in progress, and an exciting order book.

Visit us on booth 2006 to experience our innovative display solutions and talk to our experts.
