

28 JULY 2008

TRANSAS ORDERS SEOS PANORAMA FOR AN-148 SIMULATOR

SEOS has received an order from the Russian company Transas, for a cross-cockpit collimated display system to be used on an An-148 flight simulator.

The 10ft radius PANORAMA display will have a total field-of-view capability of 200° x 45°. SEOS will also supply three of its 2015HC LCOS QXGA projectors, complete with integrated pixel management and auto-alignment.

The system will initially be assembled at the Transas facility in St. Petersburg in Summer 2009, before being moved to its final operational site. The simulator will then be certified to Level D.

Initially the simulator will be set up and used as a 180° x 40° system. Future upgradeability is an important consideration, and this system is designed to retain flexibility. The projector mountings will be designed so that the projector positions may easily be changed between the two configurations.

The An-148 is an 80-seat regional aircraft built by Antonov in the Ukraine.

PANORAMA is a registered trademark of SEOS.

ABOUT SEOS

SEOS is a leading global supplier of immersive visual display solutions, offering a complete design, development, production, installation and support service. Our products are used worldwide in simulators for military and commercial flight, air traffic control, marine, surface transportation, and for digital immersive theater applications.

ABOUT TRANSAS

Transas is a world-leading developer and supplier of a wide range of software, integrated solutions and hardware technologies for the aviation and marine transportation industry, including both onboard and shore-based applications.
