SEOS EXPANDS ITS US OPERATIONS

SEOS' US operation has moved to a brand new, purpose-built 34,000 sq ft facility in Oviedo, Florida. Specifically designed to support the company's plans for growth and development, the new facility will consolidate all US operations close to our customer base.

Production and system builds of SEOS' GRIFFIN range of fast-jet products, as well as the manufacture of SEOS' PANORAMA line of products, will take place in this new plant – all part of SEOS' objective to support the increasing demand for the products from both the military and commercial simulation markets.

In addition to production, both sales and customer services capability will be enhanced. The new facility will, in time, accommodate demonstrations of the full line of SEOS products. The customer service area is also greatly expanded to facilitate the customer support of SEOS projector-based products, providing US-based customers with a more efficient and convenient way of getting repairs and warranty work performed.

Sharon Tabori, Division Manager Large Scale Optics (LSO), SEOS, explained, "This is an exciting time for SEOS. We are going through a period of sustained growth and we needed a facility that could meet our requirements, both now and into the future. I am looking forward to the challenge of supplying and supporting our customers with their display needs from Orlando."

SEOS' new facilities are located at:

5712 Dot Com Court
Oviedo, FL 32765, USA
