VR SOLUTIONS AND SEOS COMPLETE VISUAL UPGRADE FOR THE RAAF F-111 SIMULATOR

Boeing Australia Limited manage the F-111 mission simulator for the RAAF under the F-111 Weapon Systems Business Unit Contract, and have sub-contracted Thales Training and Simulation (TT&S) to perform the maintenance and operations functions.

In December 2003, TT&S contracted VR Solutions to upgrade the visual display system on the F-111 mission simulator, based in Queensland, Australia.

The contract was awarded to replace the existing SEOS projection system which had been in operation for the last 10 years, with the updated projection technology. The project incorporated SEOS' 828 CRT projectors and SEOS Odyssey handset with Quest software to control the projectors – a first in Australia.

Three 828 Projectors have been installed onto a spherical screen giving a 150 x 50 degrees field of view. The Pilot and Navigator sit in an F-111 cockpit and are immersed in the visual image to give a real life experience. Part of the installation required the design and manufacture of the mechanical interfaces to accommodate the new projection system.

VR Solutions and SEOS combined their engineering to ensure a successful upgrade.

ABOUT SEOS

SEOS is a leading global supplier of display and immersive solutions for simulation and visualization, delivering advanced solutions for the civil and military, training and research, visualization, leisure and entertainment markets.

SEOS has established a worldwide reputation for supplying innovative, high quality, cost-effective display solutions combined with a high level of expertise and exceptional service. A comprehensive range of services and unequalled design system integration capability provide a display solution that is custom designed and built for its application.
